

Events

The project consists of various events that help us expand our impact to the beneficiaries; ranging from info sessions, community breakfasts and networking & PR events.

- Info sessions serve as one of the disseminations tools to reach out to companies willing to create partnerships and explore international markets.
- Community breakfasts are a practice of bringing together ICT players in the ecosystem to share knowledge and experience over a cup of coffee/tea.
- Networking and PR events: We hold networking events that bring ICT professionals and companies to exchange ideas and explore collaboration opportunities.

Some of the planned events includes;

Conference on “Digital Africa”

Based on the constant exchange with the Zentrum für interdisziplinäre Afrikaforschung (ZIAF) and other academic institute’s surveys, we learned that the topic of "Digital Africa" is becoming increasingly important in various contexts. At the end of the conference, current problems will be discussed together. A central aspect of the conference will be that at least 50% of the speakers will come from the African continent, so that the conference will not be a "talk about" but a "talk to each other". Rwanda ICT Chamber will send a representative to attend the conference. The aim is to listen to and combine different perspectives in order to learn for the future.
