iSQI

The international Software Qualification Institute (iSQI) (https://isqi.org/en/) is one of the market leaders in software qualification that supports professionals at all stages of their careers with a broad range of internationally recognized certifications. With foundation, advanced, expert and specialist certifications, iSQI helps professionals maximise their career goals as well as stay up to date and aligned with global standards in software testing.

iSQI through AIPI project is training and certifying Rwandan companies,in order to be able to compete and to expand their own portfolio to an international level.The International Software Qualification Institute (iSQI) offers courses and international accredited certificates for different ICT skills to Rwandan IT companies. In addition, the training courses are conducted by reputable trainers, so that an increase in knowledge/ICT Skills can be expected. This work package can set a sustainable business cycle in motion as the certified participants can also have themselves accredited as iSQI trainers.

iSQI provides training in a wide range of expertise such as software testing, Scrum & Agile Methods, Usability, Management, Requirements Engineering, Software Architecture and Development.

iSQI is the preferred partner of training providers, universities and educational institutions around the world. Collaboration with iSQI offers both individuals and organisations

reassurance of the highest standards in curriculum and assessment, with globally recognized certifications.

The first training cohort of ISTQB CTFL Training was conducted in June 2021, as 30 participants from various IT companies from Rwanda participated. The training covered agile methods, techniques and tools in the context of software testing. The certification also helped participants to understand their role in the agile software development team. This is an ongoing project, and more training will be implemented.
