Tech Upskill

Graduates Resumes

Background

The Tech Upskill project is a 3-year talent detection project initiated by **AIPI (Access International Partnership in IT)** a partnership project between **Rwanda ICT Chamber** & the German based IT Association, **Bundesverband IT-Mittelstand e.V. (BITMi)** to create awareness, build interest in young people, and identify promising Tech talents and innovators across the country.

250STARTUPS (https://www.250.rw/), **FabLab(https://www.fablabs.io/)** and **kLab (https://klab.rw/)** were selected as a consortium and have been implementing the project sice 2021 . The project targets skilled students in ICT & Engineering related fields covering both software development as well as hardware innovations that could utilize 4th Industrial technologies like computer aided design and manufacturing (CAD/CAM).

As a talent detection project it aims to support talented students and fresh graduates with either tech projects that could be built into profitable businesses or talented students who wish to acquire more skills and become professionals. The best innovators with entrepreneurial projects will have the opportunity to join different incubation programs by 250Startups and others in the ecosystem after completing the program.

while the top tech talents will benefit from internship placement at local organizations and as well as partner companies in Germany, and may have other employment opportunities through KLAB's Freelancer Program. Hardware innovations will also be supported by FABLAB Rwanda introducing both participants to the latest technologies in CAD/CAM with potential to produce products for the market through the FABMAKER.

SHUMBUSHO Emile
kLab TechUpskills Second Cohort Trainee

Highest level of education

Bachelor's degree in information technology

projects worked on

- **Project 1**: Construction company website(under development), it's simple website to present a company's profile, projects and services offered by a company.

- **Project 2**: Klab mobile app,. this app were designed to support klab members and it's students as well as trainees to have all basic services that were provided offline to be accessed online.

projects worked on

- **Palm Events:** this is a mobile App that allows users to book tickets for football matches and other events sounds like a valuable and convenient platform. With such an app, users can easily plan their attendance at events and have all the information they need, such as the date, time, and location of the event, right at their fingertips.

- **Mofresh:** is a web-based and mobile application that will help farmers to book cold storage space for storing their harvested products for long period of time
